The elevation of the derrick floor above sea level is 3529 ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

Plugging operations were begun June 14th and completed June 18, 1960. All of the 3110' - 7" OD Casing run was recovered. In plugging, bridges were set and cement was run with dump bailer. Plugs were set as follows:

50' cement plug 3300'-3450'

75' cement plug 3205'-3110' (Across Red Sand)

50' cement plug 2015'-1969'

50' cement plug 790'-740' (Straddles 8 5/8" casing shoe)

20' cement plug w/ cap and marker (Surface)

The 8 5/8" OD Casing was knocked off and pulled from 632'. Rig and equipment will be moved from location, the pit will be filled and location cleaned. This will be reported when done.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
