DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

Propose to drill to approximately 3850 feet to test Grayburg Formation. Will set surface pipe at top of salt (approx. 550 feet), and propose to circulate on surface pipe with mud to surface and follow with 50 sacks cement, and then drill out to total depth. If production is obtained, will circulate mud to surface on production casing and follow with 150 sacks of cement in order to return cement back through base of salt.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
