(NOTE: Report results of multiple completion on Well  
Completion or Recompletion Report and Log form.)

17. DESCRIBE PROPOSED OR COMPLETED OPERATIONS (Clearly state all pertinent details, and give pertinent dates, including estimated date of starting any proposed work. If well is directionally drilled, give subsurface locations and measured and true vertical depths for all markers and zones pertinent to this work.)\*

The subject well was drilled to a total depth of 1832 feet with air mist at which time complete and total circulation was lost. An attempt to get out of the hole was made and the pipe and drill collars stuck at 694 feet (bit depth). Five days were spent attempting to regain circulation and unstick pipe unsuccessfully. It is requested that permission be granted to plug the existing well in the following manner: Spot calseal 50-50 plugs below the bottom of the bit until lower lost circulation zone is adequately and properly sealed off. Obtain circulation and completely cement the annulus and drill pipe plus drill collars in hole. There are 12 - 8" drill collars plus eleven 4-1/2" joints of drill pipe that will be left in hole.
