Re: Permit to Flare Eddy "GZ" State
Com #1, Millman Strawn Pool,
Unit I, Section 12-T19S-R27E,
Eddy County, New Mexico

New Mexico Oil Conservation Division
Drawer DD
Artesia, New Mexico 88210

ATTENTION: Mr. Bill Gressett

Gentlemen:

The subject well is presently producing gas at a rate of 8-10 MCFPD into the sales line pressure of 500 psi. This is very close to the economic producing limit. It is felt that this well may be capable of producing substantial quantities of gas at a lesser producing pressure. In order to evaluate the possibility of producing gas with the assistance of a compressor, we are asking permission to test the well while flaring to the atmosphere. This testing method is in an effort to simulate compressor operations.

It is felt that three days of testing will afford ample time to determine the maximum efficient gas producing rate.

Therefore, we request permission to flare gas while testing for 72 hours, during which time approximately 300 MCF gas will be flared. The 72 hour test period can be scheduled within two weeks after receipt of approval.

Yours very truly,

R.C. Anderson
R. C. ANDERSON

GSS/jr

*Approved for a period not to exceed 72 hours.
Notify this Office of date and time test will commence.*
