Gentlemen:

Reference is made to your letter dated May 8, 1979, requesting a Gas-Oil Ratio Test and a subsurface pressure test on subject well.

The well had an initial BHP of 4380#. After completing in the Wolfcamp zone and producing 1,350 barrels of oil, the stabilized BHP was 564#. These figures indicate that the reservoir is extremely limited and is over 87% pressure depleted. The well is presently closed in while waiting on Company approval to plug and abandon the Wolfcamp zone and recomplete in the Bone Spring Pool.

If more information is needed, please contact us at your convenience.

Yours very truly,

R. C. ANDERSON
