Re: State "30" Comm. No. 1
Plugback to upper morrow
J-30-19-28
Eddy County, New Mexico

Gentlemen:

Attached for your information is a c-105 for the recent workover completed on the State "30" Comm. No. 1. The well was perforated in the upper morrow and is producing a large volume of water along with the gas. Because of this large volume of water, it is requested that a one point test be accepted rather than a four point test as required on a c-122. Currently the well is producing (3-25-80) 1277 MCFGPD, 146 BWPB, 5 BOPB at a flowing T. P. of 1400 psi.
