

**ATTACHED TO AND MADE A PART OF OIL CONSERVATION DIVISION - REQUEST
FOR ALLOWABLE AND AUTHORIZATION TO TRANSPORT OIL AND NATURAL GAS**

The Charolette McKay Federal #1 well was converted to a Salt Water Disposal Well in 1992; therefore, the well does not produce oil or gas in any quantity. There is a certain amount of residual hydrocarbons that collects in the holding tanks prior to injection of the produced fluids into the well. These residual hydrocarbons remain suspended in the produced fluids after the production from the wells has been channeled through separators to separate the oil from the produced water.
