Figure 1. The effect of the concentration of the *Agrobacterium* suspension on the transformation efficiency of *Agrobacterium* strains. The *Agrobacterium* strains were incubated with the plant explants for 24 h. The explants were then cultured on the selective medium. The number of transformed explants was counted after 4 weeks. The data were expressed as the mean  $\pm$  SD of three independent experiments. The asterisks indicate the significant difference between the control and the experimental groups ( $p < 0.05$ ).
