

9. Wellsite Layout (continued):

- B. A cut of three (3) feet on the northwest corner and build a retaining wall on the west side of pad to prevent any run off into Lake McMillan.
- C. Reserve pit will be plastic-lined.
- D. The wellsite and work area, 400' X 400', have been staked.

10. Plans for Restoration of Surface:

- A. After completion of drilling and/or completion operations, all equipment and other material not needed for operations will be removed. Pits will be filled and location cleaned of all trash and junk to leave wellsite in as aesthetically pleasing condition as possible.
- B. Any ungraded pits containing fluids will be fenced until they are filled.
- C. After abandonment, any special rehabilitation and/or revegetation requirements of surface management agency will be complied with and accomplished as expeditiously as possible. All pits should be filled and levelled within 90 days after abandonment.

11. Other Information:

- A. Topography: Wellsite is located on the northeast corner of Lake McMillan on a level area atop a bluff overlooking Lake McMillan.
- B. Soil: Soil is sandy loam underlain by caliche.
- C. Flora and Fauna: Vegetative cover is generally perennial native range grasses with a few mesquite and greasewood brush. Wildlife in the area is that typical of semi-arid desert land and includes coyotes, rabbits, rodents, reptiles and birds.
- D. Ponds and Streams: The proposed location is 350' east of the high water mark of Lake McMillan. There is a windmill $\frac{1}{2}$ mile south of the proposed location.
- E. Residences and Other Structures: Nearest occupied dwelling is at the dam on Lake McMillan approximately four miles southwest of the proposed location.
- F. Land Use: Land is used for cattle grazing.
- G. Surface Ownership: Wellsite is on Federal Surface.
