

8. ANCILLARY FACILITIES:

- A. None necessary.

9. WELL SITE LAYOUT:

- A. Exhibit "C" shows the relative location and dimensions of the well pad, mud pits, reserve pit and trash pit, and the location of major rig components.
- B. Clearing and leveling of the well site is required. An approximate 2-foot cut will be necessary on the east side of the well pad with a corresponding fill on the west side.
- C. The pad and pit area has been staked and flagged.

10. PLANS FOR RESTORATION OF THE SURFACE:

- A. After completion of drilling and/or completion operations, all equipment and other material not needed for operations will be removed. Pits will be filled and the location will be cleaned of all trash and junk to leave the well site in an as aesthetically pleasing condition as possible.
- B. Any unguarded pits containing fluids will be fenced until they are dry.
- C. After abandonment, all equipment, trash and junk will be removed and the well site will be cleaned. Any special rehabilitation and/or special revegetation requirements of the surface management agency will be complied with and will be accomplished as rapidly as possible.

11. OTHER INFORMATION:

- A. Topography: The land surface is nearly level to gently sloping. Regionally, land slope is to the southeast.
- B. Soil: Top soil at the well site is a gravelly, sandy loam.
- C. Flora and Fauna: The vegetative cover is sparse and consists of greasewood, desert shrub, weeds and perennial range grasses. Wildlife in the area is that typical of semi-arid desert land and includes coyotes, rabbits, rodents, reptiles, dove and quail.
- D. Ponds and Streams: There are no rivers, lakes, streams, or ponds in the area.
- E. Residences and Other Structures: There are no occupied dwellings
