

10. PLANS FOR RESTORATION OF THE SURFACE:

- A. After completion of drilling and/or completion operations, all equipment and other material not needed for operations will be removed. Pits will be filled and the location cleaned of all trash and junk to leave the wellsite in as aesthetically pleasing condition as possible.
- B. Any unguarded pits containing fluids will be fenced until they are filled.
- C. After abandonment, all equipment, trash and junk will be removed and the location cleaned. Any special rehabilitation and/or special revegetation requirements of the surface management agency will be complied with and accomplished as expeditiously as possible.

11. OTHER INFORMATION:

- A. Topography: The terrain at the area surrounding the location is nearly level and slopes to the southwest. See Exhibit "B". Regional slope is also to the southwest.
- B. Soil: Top soil at the wellsite is sandy.
- C. Land Type & Use: The vicinity surrounding the drillsite is semi-arid rangeland and its primary use is for grazing.
- D. Flora & Fauna: Vegetative cover is sparse. Flora consists primarily of shinnery and yucca interspersed with range grasses and weeds. Several lizards and rabbits were observed, however fauna for this type of habitat also includes snakes, rodents, coyotes, skunks, quail, dove, and other small birds.
- E. Ponds & Streams: None.
- F. Water Wells: There are no water wells within two miles of the drillsite.
- G. Residence & Other Structures: There are no occupied dwellings within two miles of the drillsite.
- H. Archaeological, Historical & Cultural Sites: A reconnaissance of the 400' x 400' area was made by New Mexico Archaeological Services, Inc. on 7-2-81 and no sites were found.
- I. Surface Owner: U. S. Government.
