CASING TEST AND CEMENT JOB ☐  
OTHER: Plug & Abandon Cisco; Complete Wolfcamp ☒

12. Describe Proposed or Completed Operations (Clearly state all pertinent details, and give pertinent dates, including estimated date of starting any proposed work) SEE RULE 1103.

Re-Completion operations began on November 28, 1989.

A Cast Iron Bridge Plug was run and set at 7800' with 35' of cement on top, plugging off perforations from 7857' - 7864' K.B.

250 gallons of 10% Acetic Acid was spotted at 7535' K.B.

The Wolfcamp Formation was perforated from 7520' - 7530' (ISPF) (11 holes) with 0.56" diameter holes and 4" premium charge casing gun.

The Wolfcamp perforations (7520' - 7530' K.B.) were then acidized with 2000 gallons MOD 202 Acid with 20 ball sealers and 1000 scf nitrogen/barrel, and 2% KCL water for flush.

Last swab test recovered 25 barrels of formation water with a slight trace of gas.

The well is currently Shut-In waiting on procedure to plug and abandon.

I hereby certify that the information above is true and complete to the best of my knowledge and belief.
