Re: Application for Disposal of Produced
Water from our Mabel Hale Federal #1,
(NM 0560353) Sec. 11, T-19-S, R-30-E,
Eddy County, New Mexico

Gentlemen:

Great Western Drilling Company respectfully requests administrative approval of application to dispose produced water from the Mabel Hale Federal #1 into Amax Chemical Corporation's tailings pond, which is located in parts of Sec. 10 (NM 0560353) Sec. 14 (NM 01085) and Sec. 15 (NM 0243916). Mabel Hale Federal is located in Sec. 11, T-19-S, R-30-E, (NM 0560353) and is 1,980' FNL & 1,980' FWL and is approximately 3,290' NE of Amax's pond.

We propose laying a line for produced water from the tank battery to the pond. Subject well is currently producing an average of 51 Bbls. oil and 8-10 Bbls. water per day.

The old railroad track on the plat has been abandoned and the rails have been taken up. Attached: Complete water analysis, Amax Chemical Corporation approval and plat of disposal site.

Yours very truly,

M. B. Myers
Ass't. to Gen. Supt.
