	No well will be assigned an allowable greater than the amount of oil produced on the official test. During gas-oil ratio test, each well shall be produced at a rate not exceeding the top unit allowable for the pool in which well is increased by more than 25 percent. Operator is encouraged to take advantage of this 25 percent tolerance in order that well can be assigned: increased allowables when authorized by the Commission. Gas volumes must be reported in MCF measured at a pressure base of 15.025 paia and a temperature of 60° F.
