

YATES PETROLEUM CORPORATION

Jenny Com. #1
Drilling Prognosis
Page 2

This well was originally drilled by Conoco Inc. as the Jenny Com. #1. It was spudded on November 17, 1990.

Yates Petroleum Corporation proposes to re-enter this existing wellbore with a pulling unit. The 9 5/8" and 7" casing are set and cemented in place. The pulling unit will squeeze off the existing perforations (7,669-7,899'), and clean out the well to the old TD of 8,100'. A drilling rig will then move in and deepen the well to 9,300' with a 6 1/8" bit. The 4 1/2" liner will then be set from 7,600'-9,300' and cemented in place with 200 sx Super C Modified.

MUD PROGRAM: 0- 8100' Cut Brine (Weight: 9.0-9.2, Vis: 30-34).
8100'- 9300' Salt Gel/Starch/Drispac (Weight: 9.2-9.8 Vis: 30-38,
<10-15).

BOPE PROGRAM: 3000 # BOPE will be nipped up on 9 5/8 in casing.
