☒ Other SURFACE COMMINGLING  
& OFF LEASE STORAGE  
☐ Change of Plans  
☐ New Construction  
☐ Non-Routine Fracturing  
☐ Water Shut-Off  
☐ Conversion to Injection  
☐ Dispose Water

(Note: Report results of multiple completion on Well Completion or Recompletion Report and Log form.)

13. Describe Proposed or Completed Operations (Clearly state all pertinent details, and give pertinent dates, including estimated date of starting any proposed work. If well is directionally drilled give subsurface locations and measured and true vertical depths for all mearkers and zones pertinent to this work.)\*

The Yates Federal #1-4 wells currently go into a header and then into a heater treater. The oil goes into three (3) 500 BBL stock tanks. The water goes to the Hadson battery and then to the Hadson Federal #3 disposal well. It is proposed, due to the condition of these tanks and our heater treater, to go directly to the heater at the Hadson Federal Battery. The tanks and heater at this location have been coated with fiberglass and should be in better condition to keep from having any unnecessary spills or leaks. The total oil production on the Yates Federal #1-4 wells is 44 BOPD. The oil production on the Hadson Federal #1-2 wells is 16 BOPD. We have abundant capacity to handle production from all these wells at the Hadson Battery. We plan to allocate the production based on a periodic test of each well.

14. I hereby certify that the foregoing is true and correct
