

**STRAWBERRY 7 FED COM #2**  
**SURFACE USE AND OPERATING PLAN**  
**PAGE 2**

3. Location of Existing Wells

Exhibit #4 shows all existing wells within a one-mile radius of the proposed STRAWBERRY 7 FED COM #2.

4. Location of Existing and/or Proposed Facilities

A. In the event the well is found productive, a tank battery will be constructed and the necessary production equipment will be installed at the well site.

- 1) If necessary, the well will be operated by means of an electric prime mover. Electric power poles will be set along side of the access road within the same ROW.
- 2) The tank battery, all connections and all lines will adhere to API standards.
- 3) A gas pipeline (sales line) is anticipated to be constructed to the side of the access road within the same ROW.

B. If the well is productive, rehabilitation plans are as follows.

- 1) The reserve pit will be back-filled after the contents of the pit are dry (within 120 days after completion, weather permitting).
- 2) Caliche from unused portions of the drilling pad will be removed. The original topsoil from the well site will be returned to the location. The drill site will then be contoured to the original natural state.

5. Location and Type of Water Supply

The Strawberry 7 Fed Com #2 will be drilled using a combination of brine and fresh water mud systems (outlined in Drilling Program). The water will be obtained from commercial sources and will be transported over the existing and proposed roads. No water well will be drilled on the location.
