DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

Seven Rivers formation at approximately 650 feet is projected horizon.

It is planned to cement one joint of surface pipe (circulate to surface) of approximately 45 feet length of 10-3/4" diameter, 32 lb per foot; or of 9-5/8" diameter, 28 lb per foot.

It is contemplated that no further casing will be required before reaching the objective depth. If this horizon is non productive, the well will be plugged in accordance with requirements of your office. If same is productive, a string of 7 inch pipe, 17 lb per foot, will be run and cemented at bottom with 25 sacks of cement, as production surface.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
