RECEIVED
APR 8 1959
U. S. GEOLOGICAL SURVEY
ARTESIA, NEW MEXICO

The elevation of the derrick floor above sea level is 3310 ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

Plan to drill to San Andres around 2500'. Will test Queen & Seven Rivers Zones. Will run casing as required by formations encountered. Plan to shut off top gravels with 10" casing and water with 8 5/8" casing. It is not known how much casing will be necessary to shut off top waters.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
