(1/4 Sec. and Sec. No.) (Twp.) (Range) (Meridian)

Cedar Hills Eddy New Mexico

(Field) (County or Subdivision) (State or Territory)

The elevation of the derrick floor above sea level is 3280 ft.TL 537'

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

Place a 25 ft. cement plug in bottom of hole and test shut off of all fluids.

Shoot 7" pipe off at about 300 ft. and pull.

Fill hole with heavy mud and place ^{15'} sack plug where 7" is shot off.

Fill hole with heavy mud to near surface and place marker in cement.

Leave the 8", now set in heavy mud at 363, which will insure complete shut-off and separation of all fluids.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
