(County or Subdivision)

New Mexico

(State or Territory)

The elevation of the derrick floor above sea level is ..... ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

We propose to drill a well to approximately 1500', or if commercial production is reached at a lesser depth. Size of hole 10" to approximately 300' to set 8 5/8" OD pipe on packer to shut off water and to produce well if oil is encountered. After such time as well is produced long enough to determine if well is going to hold up, 8 5/8" OD pipe will be cemented, or pulled, and we will run a 1 1/2" pipe and cement.

APPROVAL IS SUBJECT TO STATE  
ENGINEERS REGULATION  
ON "APPLICATION FOR PERMIT TO  
DRILL FOR OIL" IN WATER  
BOX 810, ROSWELL, NEW MEXICO

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
