

Box 1545
Hobbs, New Mexico
October 7, 1949

Mr. Leo Schuts
State Land Office
Santa Fe, New Mexico

Dear Leo:

As per your request of September 27, 1949, I have again visited the Happler gas well and have the following report:

Total depth hole 833 feet, had 3 1/2 balers of water from 830 to 833, per hr. put in a four footbridge of rock, tampered down with tools, then put 100 lbs of lead wool on top of the rock bridge, and then drove it down, let it set 12 hours, baled water off, then let set 2 hours, and found no water in hole, then dumped 6 sacks of cement on top of lead wool, let set 24 hours, then run baler, and found no water in hole, the cement and lead wool with the rock bridge plugged to hole back to 790 feet, then shot the well, put in 6 feet of gravel on top of the cement for a cushion for the shot, then when cleaned out after the shot we drove the tin containers down to 780 feet, this is the bottom of the hole as plugged back. 10 inch casing pulled, 8 inch and 7 inch cemented together to the top of the hole. (Information from Form C-105 upon completion of the well)

The test I made is as follows:

After blowing wide open through 2" for 45 minutes, well was delivering gas at rate of 2,310,000 cu. ft. per day.

Very truly yours,

ROY:cg

1. The first step is to identify the problem or question that needs to be answered. This involves understanding the context and the specific requirements of the task.

1000

1. The following information was obtained from the records of the Georgia Department of Transportation, Division of Highway Planning and Construction, regarding the construction of the Georgia Turnpike Authority (GTA) and the Georgia Turnpike System (GTS):
