1. The first step is to identify the problem or goal. This involves understanding the current situation and what needs to be achieved.

1. *Chlorophyll a* (Chl *a*)

$$= \frac{1}{2} \left( \frac{1}{2} \right)^{n-1} = \frac{1}{2^n}$$

1. The first of these is the fact that the majority of the population of the country is of African descent. This is a result of the fact that the country was a colony of Portugal for over 500 years, and the Portuguese brought with them a large number of African slaves. These slaves were used on the plantations and in the mines, and their descendants formed the majority of the population. 2. The second factor is the fact that the country has a long history of racial discrimination. This has been a result of the fact that the white minority has always been in a position of power, and has used its power to discriminate against the black majority. This has led to a deep-seated feeling of resentment and hostility among the black population. 3. The third factor is the fact that the country has a large and growing urban population. This has led to a concentration of the black population in the cities, where they are often subjected to discrimination and exploitation. This has led to a feeling of alienation and a desire for change. 4. The fourth factor is the fact that the country has a long history of political instability. This has been a result of the fact that the white minority has always been in a position of power, and has used its power to suppress the black population. This has led to a feeling of frustration and a desire for change. 5. The fifth factor is the fact that the country has a large and growing middle class. This has led to a feeling of hope and a desire for change. This middle class is made up of people who are educated and who are aware of the problems of the country. They are often the ones who are leading the struggle for change. 6. The sixth factor is the fact that the country has a large and growing industrial sector. This has led to a feeling of hope and a desire for change. This industrial sector is made up of people who are employed in the manufacturing and service industries. They are often the ones who are leading the struggle for change. 7. The seventh factor is the fact that the country has a large and growing military. This has led to a feeling of hope and a desire for change. This military is made up of people who are trained in the use of arms and who are aware of the problems of the country. They are often the ones who are leading the struggle for change. 8. The eighth factor is the fact that the country has a large and growing population of students. This has led to a feeling of hope and a desire for change. These students are often the ones who are leading the struggle for change. 9. The ninth factor is the fact that the country has a large and growing population of professionals. This has led to a feeling of hope and a desire for change. These professionals are often the ones who are leading the struggle for change. 10. The tenth factor is the fact that the country has a large and growing population of artists and writers. This has led to a feeling of hope and a desire for change. These artists and writers are often the ones who are leading the struggle for change.

the 1990s, the number of people in the world who are under 15 years of age is expected to increase by 1.5 billion, from 1.1 billion in 1990 to 2.6 billion in 2010. The number of people aged 65 and over is expected to increase by 1 billion, from 350 million in 1990 to 1.4 billion in 2010. The number of people aged 15-64 is expected to increase by 1.5 billion, from 1.1 billion in 1990 to 2.6 billion in 2010.
