DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

Filled hole from 962 feet to 945 feet with gravel and drove 1200# lead wool plug, to shut off water encountered at 947'. Then ran 2 sack cement plug on top of lead wool. After standing 24 hours for cement to set, bailer test showed water-shut-off. Then filled with mud to 790 feet, ran gravel bridge and drove 200# lead wool plug, to shut off water encountered at 805'. Then ran 2 sack cement plug on top of lead wool. After standing 24 hours for cement to set, test by bailing showed complete water shut-off. Also pulled all 10" and 8" casing in hole. Completed plugging work on February 9, 1945, and after pulling casing shut gas well in.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
