(NOTE: Report results of multiple completion on Well
Completion or Recompletion Report and Log form.)

17. DESCRIBE PROPOSED OR COMPLETED OPERATIONS (Clearly state all pertinent details, and give pertinent dates, including estimated date of starting any proposed work. If well is directionally drilled, give subsurface locations and measured and true vertical depths for all markers and zones pertinent to this work.)*

On or about December 8th, 1966, we propose to commence operations to test the Pennsylvanian section in the subject well. The well is currently producing from the Delaware in the interval 6890-6950. This zone is to be squeezed off, and plugs will be drilled to permit testing the open hole section below the 7" liner, from 12,035 to 13,300. Should no show develop in this section, the interval 11,930 to 11,980 is to be tested. This interval produced at the rate of 3810 MCF per day of gas on drill stem test. We intend to recomplete the well as a gas well producing from this zone. The attached sketch provides further details of this proposal.
