DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

I plan to drill a 1700' Yates lime test using cable tools all the way.

8-5/8" surface casing will be run to the first salt at approximately 480' and cemented with 125 sacks.

The 7" oil string will be cemented at approximately 1620' in hard sand and with sufficient cement to get returns to the surface.

All casing will be set under procedures approved by the U. S. Geological Survey.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
