DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

This well was drilled to total depth of 2850' without encountering oil or gas production, and has been abandoned, plugging as follows. Bottom of hole was plugged from 2850' to 2780' with 20 sacks of cement. Hole was filled with heavy mud, and a 35-sack quick-set cement plug was spotted from 2375' to 2275' (at base of salt). Spotted cement plug of 20 sacks from 920' to 850' (at top of salt and in bottom of 8-5/8" casing). Parted and pulled 8-5/8" casing at 580', and set customary 4" pipe marker in top of hole with 20 sacks of cement, leaving all 10-3/4" casing cemented in the hole. The above work was completed 12-16-44, and location is now cleaned up and ready for inspection.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
