DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

The lower zone (Delaware Sand) of the subject well has been plugged as follows:

The hole was filled with mud laden material; a 25 in cement plug was set 6016-5892'; Baker Production Packer left in hole at 2600'; cast iron bridging plug set at 2356'

The well will now be produced from the Tensill Line only.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
