DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding, cementing points, and all other important proposed work)

Pursuant to our telephone conversation this is to further inform you of our change in plans to drill the subject well; We had originally planned to drill to 400' with cable tools and run and cement 13-3/8" at that depth. Since difficulty was encountered in maintaining a straight hole with cable tools, at 80', we plugged back to 76' and ran and cemented 20", 66 lb conductor pipe at 76'. We now plan to move off the cable tool rig, rig up a rotary, drill to 3000' with air, run 9-5/8" 36 lb casing to 3000' and cement to surface. The remainder of our plan to drill remains unchanged.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
