Artesia, New Mexico 88210

Dear Mr. Yates:

Reference is made to your letter of April 19, 1968 advising that the New Mexico Oil Conservation Commission has approved your plug and abandonment program for the above subject well and desires a statement of acceptance from Offset Operators. We understand that you intend to spot a cement plug over the packer at a depth of 8674' with the Atoka perforations at a depth of 9945-9953' and the Morrow perforations at a depth of 10,308-10,396' open in the well bore below the packer.

Texaco Inc. waives objection to this plugging program since the Atoka and Morrow zones are non-productive in this area and are believed to exhibit very low porosities and permeabilities. Further, Texaco's undeveloped R. E. Boyle Federal Lease is approximately 3/4 mile east of the subject well and would be unaffected.

Yours very truly,

  
V. F. Dullnig  
Assistant Division Manager
