The elevation of the derrick floor above sea level is _____ ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

This well is to be a test in the Upper Penn and Morrow Sands. Well to be drilled to an approximate depth of 9700' with rotary tools. 13-3/8" 48' casing will be run to approximately 200' and cemented to surface. 9-5/8" 36' casing will be run to approximately 2200' and cemented to surface. The Upper Penn and Morrow formation tops are expected to be at approximately 7200' and 9000' respectively. If both zones are productive the planned program is to set 7" to TD and dually complete.
