Devon Energy plans to reenter this P&A well bore, drill out the cement plugs and retainers, burn over the packer at 7271', and recover tubing to at least 8200'. Once casing integrity has been established, the casing will be perforated between 7,334' and 7,700'. An Electric Submersible Pump will then be run into the well bore and a production test will commence. If the well does not produce hydrocarbons in commercial quantities, the well will be T&A'd to be held in reserve as a possible SWD well. Programs to adhere to onshore oil and gas regulations are outlined in the following exhibits and attachments.
