## DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

We expect to set and cement 200' of 13-3/8" surface casing, 2000' of 9-5/8" intermediate, and 9900' of 5-1/2" oil string, using sufficient cement to adequately protect any oil or gas shows. The principal objective of this well is the Cisco-Canyon Carbonate gas horizon (expected at 7010'). The Morrow Sandstone (expected at 8755') is also a prospective horizon.

This well is to be drilled pursuant to a Communitization Agreement covering all of Sec. 21-T21S-R23E, N.M.P.M., approved by U. S. G. S. 4/7/64, effective 3/3/64.

(Certified plat attached showing Unit and Well Location)

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
