Well No. 1-6 is located 660 ft. from N line and 400 ft. from W line of sec 6
NA-05699 Sec. 6 22S 24E N.M.P.M.
(1/4 Sec. and Sec. No.) (Twp.) (Range) (Meridian)
Wildcat Eddy New Mexico
(Field) (County or Subdivision) (State or Territory)

The elevation of the derrick floor above sea level is 3935 ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

We propose to drill a 7500 foot well to test the Cisco of the Upper Pennsylvanian.

Cable tools will be used to drill to the Glorieta at an approximate depth of 1800 feet. 13 3/8" casing will be run to about 500 feet and cemented with 200 sacks. 10 3/4" pipe will be run to about 1800 feet in the Glorieta and cemented with 200 sacks. Out from under the 10 3/4" pipe, drilling will be done with rotary and carried to total depth.

If oil or gas is found in commercial quantities, 4 1/2" or 5 1/2" will be run as a production string and cemented with 250 sacks.

All casing run and cemented will conform to methods approved by the U. S. Geological Survey.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
