

### WELL SUPERVISION

Well site supervision will be maintained from surface to total depth. Samples will be caught, washed and sacked from 10,652' to total depth at 10 foot intervals. Mud logging and gas detector unit will be operative from 10,652' to total depth. All significant shows of oil and/or gas will be drill stem tested. Mechanically recorded drilling time will be maintained from 10,652' to total depth. Blowout preventer stack and casing head will be pressure tested before drilling bridge plug at 2850' and a daily check of the blowout preventer system will be made thereafter.
