

Mr. Jim Knoff  
U. S. Geological Survey  
Page 2  
March 7, 1973

- (5) The land surface will be restored to as near natural as possible and to the satisfaction of the USGS after drilling and completion operations have ceased.
- (6) All detrimental waste will be disposed of in accordance with good disposal practices.
- (7) Well control equipment will consist of two 5000 psi WP ram-type BOP's and one 5000 psi WP Hydril BOP with choke manifold.
- (8) A pit volume totalizer will also be used while drilling thru' any suspected abnormally pressured zone.

If additional information is required, please contact the undersigned.

Sincerely,

Jack D. Semon  
Division Engineer
