SUBSEQUENT REPORT OF:

WATER SHUT-OFF ☐FRACTURE TREATMENT ☐SHOOTING OR ACIDIZING ☐(Other) ☐REPAIRING WELL ☐ALTERING CASING ☐ABANDONMENT* ☐(NOTE: Report results of multiple completion on Well
Completion or Recompletion Report and Log form.)

17. DESCRIBE PROPOSED OR COMPLETED OPERATIONS (Clearly state all pertinent details, and give pertinent dates, including estimated date of starting any proposed work. If well is directionally drilled, give subsurface locations and measured and true vertical depths for all markers and zones pertinent to this work.) *

Our original permit specified setting a full 5-1/2" production string from total depth to surface, as well as an intermediate string of 8-5/8" from 11,194' to surface. (The 8-5/8" string has already been set and cemented.) Due to delivery date of 5-1/2" casing string, as advised by supplier, we propose the following immediate changes:

Set 5-1/2" production liner from total depth to approximately 11,000', with liner tie-back sleeve at approximately 11,000', cemented sufficient to circulate around the liner, dress out liner tie-back sleeve, check top of cement inside 5-1/2" liner. Suspend operations at this point until the remainder of 5-1/2" casing string is available, at which time the balance of that string will be run, tied into the liner tie-back sleeve, and cemented at the liner hanger.

No completion work of any nature will be performed until the entire string of 5-1/2" casing has been run.
