O. C. C.
ARTESIA. OFFICE

Attn: W. A. Gressett, Supervisor

Mr. Gressett:

It is requested that the subject well--Strawn zone--be exempt from the statewide rule #402 that required an annual shut-in pressure test.

The subject well is dually completed in both the Strawn and Morrow Formations. The Strawn is being produced from the 2 7/8" tubing and the 7" casing annulus. The subject well loads up with fluid and is currently being produced by stop cocking on a cycle of shut-in one day and producing 7 to 10 days. We do not believe any shut-in surface pressure recorded on this well would be of value for reservoir information, and it is uneconomical to obtain a bottom hole pressure on this zone.

Yours very truly,

J. E. Pullig
Division Manager
