Reference: Packer Leakage Test
Government Z No. 1
Unit K, Section 23, T-20S, R-28E
Eddy County, New Mexico

Gentlemen:

The Government Z No. 1 was completed as a dual Morrow-Wolfcamp producer until the Morrow was temporarily abandoned in a workover performed in February, 1986. Consequently, no packer leakage test was performed on this well in August, as scheduled.

The Morrow was TA'd by dumping 2 sacks sand and 3 sacks cement on top of a Model DB packer with a blanking plug in the tailpipe. The Morrow perforations are from 11,313 - 320' and the new plugback depth is 11,162'. A Baker Lok-set packer was set above the Wolfcamp perfs, and the zone is produced through the tubing.

If there is any question concerning the current completion of the Government Z No. 1, please contact me at 915/685-5897.

Sincerely,

Rebecca A. Egg
