RE: McNew Well No. 1
G Sec. 5-T-21S-R-26E
Eddy County, New Mexico

Gentlemen:

Enclosed please find an Application to Drill and a Well Location and Acreage Dedication Plat for the subject well.

The proposed location is 514' from the Pecos River. Monsanto proposes to construct an earthen dike between the drilling mud reserve pits and the river to contain well fluids in the unlikely event of an overflow from the pits. Every effort will be made by Monsanto and the drilling contractor to prevent contamination of the Pecos River during the drilling and completion operations.

If any additional action is required by Monsanto to obtain early approval of the application, please notify us.

Yours very truly,

E. M. Scholl
District Production Manager
