

- C. All waste associated with the drilling operation will be buried in place in a separate pit. Garbage and debris will be buried at least 3' deep. Any plastic material used to line the pits will be cut off below ground level, as far down as possible and disposed of before the pits are covered.
- D. Surface restoration will be in accordance with the requirements of the Bureau of Land Management.
- E. The well site, if a producer, will be maintained and kept clean of all trash and litter or other foreign material which detracts from the surrounding environment. Equipment will be painted and maintained in accordance with good operating practice.

After the well site is cleaned and pits and sumps backfilled, any obstruction to the natural drainage will be corrected by ditching and/or terracing. All disturbed areas, including any access road no longer needed, will be ripped.

## 11. Other Information.

- A. Topography: Terrain is rolling and broken. The drilling site falls between two pronounced canyons, but the access road and location is fairly level. The area becomes more rugged and mountainous to the west. Drainage is to the east at approximately 30' per mile.
- B. Soil: Thin fine sandy soil with numerous rock outcrops.
- C. Flora and Fauna: Vegetative cover is generally sparse consisting of mesquite, yucca, shinny oak and perennial native range grasses. Wildlife in the area is typical of semi-arid desert land and includes coyotes, rabbits, rodents, reptiles, dove, quail and deer.
- D. Ponds and streams: No streams or ponds were noted in the area.
- E. Residences and other structures: none.
- F. Archeological, Historical and Cultural Sites: None observed in the area. The Agency of Conservation Archeology has been engaged to make a survey of the well pad and access road.
- G. Land Use: Ranching and hunting.
- H. Surface Ownership: The surface is owned by the Federal Government, administered by the BLM. The grazing allottee is Armstrong and Armstrong, P. O. Box 1873, Roswell, New Mexico 88201.
