

8. No abnormal temperature or H₂S is anticipated. Possibility of high pressure zones in the Wolfcamp, Strawn & Atoka. Adequate flare lines will be installed off the mud separation and testing equipment to insure that gas may be piped away a safe distance from the well where it may be ignited and burned.

9. Cementing Program:

13-3/8" surface string will be cemented w/550 sx. or enough to circulate to surface. Cement will be Class "C" with 2% CaCl.

8-5/8" intermediate string will be cemented w/1000 sx. or enough to circulate to surface. Cement will include 800 sx. Lite Wate w/1/4# flocele, 5# gilsonite & 2% CaCl plus 200 sx. Class "C" w/2% CaCl.

5-1/2" production string will be cemented w/800 sx. Class "H" w/0.75% CFR-2 and 5# KCL/sk.

10. Anticipated Starting Date & Duration of the Operations:

Following approval of Drilling Permit, work will start as soon as a suitable rig becomes available. This is estimated to be November 1, 1977. Drilling time should be approximately 45 days. It should take an additional 7-21 days to complete the well.
