Attn: Mr. W. A. Gressett, Supervisor

O. C. D.

Gentlemen:

ARTESIA, OFFICE

Please find attached Forms C-104, C-102 (amended) and the deviation survey pertinent to the captioned well.

In review, this well was originally scheduled as a Morrow gas test with proration unit covering the west half (320 acres) of the captioned section. The Morrow was non-productive, but a potentially productive Bone Springs zone was discovered. The Bone Springs zone was tested (but not potential tested), and the well was shut in pending evaluation of the sour Bone Springs reserves.

The attached form C-104 describes the well as it currently stands. The attached C-102 describes the amended proration unit (160 acres) as it applies to the proposed Bone Springs completion. Also attached is a deviation record.

Due to the toxic nature of the gas and condensate to be produced from this well, it is Bass' desire to AOF this well directly to sales. It is our understanding that, with your acceptance of the attached forms, this type of test may be performed. Also we understand that a revised C-104, C-105 (four point) and a complete set of well logs will be required subsequent to the test.

Notification from the various purchasers of their intent to buy products from this well should be transmitted to you in the near future.

If you should require any additional information concerning this project, please contact R. M. Cunningham at the letterhead address.

Very truly yours,

J. E. Pullig
Division Manager
