

9. WELLSITE LAYOUT:

- A. Exhibit C shows the relative location and dimensions of the well pad, reserve pits and major rig components.
- B. The terrain is mountainous but our proposed location is relatively flat. The topsoil consists of dirt and rock. Minimal levelling will be required.
- C. The pit and pad have been staked.

10. PLANS FOR THE RESTORATION OF THE SURFACE:

- A. After finishing drilling and/or other completion operations, all equipment and other material not needed for further operations will be removed. Pits will be filled and the location cleaned of all trash and junk to leave the wellsite as pleasant in appearance as possible.
- B. If the proposed well is non-productive, all restoration and/or vegetation requirements of the Bureau of Land Management and the United States Geological Survey will be complied with and will be accomplished as quickly as possible. All pits will be filled and leveled within 90 days after abandonment.

11. OTHER INFORMATION:

- A. The surface is Federal.
- B. Topography consists of a flat area with greasewood, cat claw and grass. Usual wildlife of this region consists of rodents, birds, deer, etc.
- C. No ponds, lakes, streams or rivers in the immediate area.
- D. There is a windmill 3/10 mile north of the location. A house is located one mile south across the highway from the proposed location. The only fences are along the highway.
- E. There is no evidence of any archaeological, historical or cultural sites in the area.
