

2. PLANNED ACCESS ROAD.

- A. The proposed new access road will be approximately 6/10 of a mile coming from the south from the old ranch road referred to earlier.
- B. The new road will be 12 feet in width (driving surface) except at the point of origin, adjacent to the existing road, at which point enough additional width will be provided to allow heavy trucks and equipment to turn.
- C. The new road will be covered with the necessary depth of caliche. The surface will be crowned, with drainage on both sides. No turnouts will be necessary.
- D. The center line of the new road has been staked and flagged, and the route of the road is clearly visible.

3. LOCATION OF EXISTING WELLS.

- A. There is a producing gas well on this lease at the present time, located in the NE/4, SE/4 of Section 5.
- B. In the event that the well is productive, the necessary production facilities will be installed on the drilling pad. If the well is productive of oil, a gas or diesel self-contained unit will be used to provide the necessary power. No power will be required if the well is productive of gas.

5. LOCATION AND TYPE OF WATER SUPPLY.

- A. It is planned to drill the proposed well with a fresh water system. The water will be obtained from commercial sources and will be hauled to the location by truck over the existing and proposed roads shown in Exhibit A.

6. SOURCE OF CONSTRUCTION MATERIALS.

- A. Any caliche required for construction of the drilling pad and the new access road will be obtained from an existing caliche pit located on State-owned surface in Section 29-T19S-R29E.
