14. No abnormal temperatures or H₂S gas is anticipated. There is a possibility of overpressured zones in the Wolfcamp, Strawn and Atoka. Adequate flare lines will be installed off the mud/gas separator and testing equipment to insure that gas may be piped away a safe distance from the well where it may be ignited and burned.
15. Anticipated starting date is one week to one month after this Application is approved by the Geological Survey, depending upon rig availability. It should take approximately 40 days to drill the well and another 7-21 days to complete.
16. The Multi-Point Surface Use and Operation Plan for submission to the Bureau of Land Management is attached.
17. If the District Engineer needs additional information to evaluate this application, please advise.

Yours very truly,

Elmer W. Startz
