best of my know-

We will still be assigned an allowable greater than the amount of oil produced on the official test. During gas-oil ratio test, each well shall be produced at a rate not exceeding the top cut yield by more than 15 percent. Operator is encouraged to take advantage of this 15 percent tolerance. Gas volumes must be reported in MCF measured at a pressure base of 14.732 psia and a temperature of 60°.

Report feeling pressure in class of taking pressure for any work producing the 25th evening

Mail original and one copy of this report to the district office of the New Mexico Oil Conservation Division in accordance with 01 and appropriate pool rules.
