13. Describe Proposed or Completed Operation (clearly state all pertinent details, including estimated starting date of any proposed work and approximate duration thereof. If the proposal is to deepen directionally or recompleat horizontally, give subsurface locations and measured and true vertical depths of all pertinent markers and zones. Attach the Bond under which the work will be performed or provide the Bond No. on file with BLM/BIA. Required subsequent reports shall be filed within 30 days following completion of the involved operations. If the operation results in a multiple completion or recompleat in a new interval, a Form 3160-4 shall be filed once testing has been completed. Final Abandonment Notices shall be filed only after all requirements, including reclamation, have been completed, and the operator has determined that the final site is ready for final inspection.)

Currently the gas production from this well goes through a stack pack and dehydrator before entering the Indian Basin Gas Plant gathering system to be sent directly to the plant. Marathon Oil Company proposes to take this gas production, via pipeline, to Kerr McGee's West Indian Basin Unit compressor station, located in the SW quarter of Section 17, T-21-S, R-23-E. From the compressor station, the gas will be transported, via pipeline, to the Indian Basin Gas Plant for processing. The gas production will be metered before entering the pipeline to the compressor station. An updated facility diagram is attached and should replace Exhibit #32 in the original commingle agreement.
