Gentlemen:

Administrative approval for dual completion of the referenced well is hereby respectfully requested. Plans for completion of the well are to produce dry sweet gas from the Morrow perforations from 12202 to 12432 up the 5 1/2" casing annulus and to produce the Strawn oil and gas from the perforations from 11127 to 11290 up the 2 7/8" tubing. The two producing intervals will be isolated from each other with a set of packers and flow will be diverted with a cross over choke. A well bore diagrammatic sketch of the proposed installation is attached (Attachment A).

The Morrow interval from 12202 to 12432 has been completed and tested for 1200 MCFD. A Guiberson Uni-VI packer has been set above the Morrow perms at 12100 feet isolating the Morrow from the Strawn.

The Strawn completion will be attempted during the week of April 9th - 13th. Plans to complete include selectively perforating and treating the Strawn perms, testing for production and installation of the producing equipment per Attachment A.
