

Vision Energy, Inc.
State #2
Surface Use and Operating Plan
PAGE # 5

- B. The disturbed area will be revegetated by reseeded during the proper growing season with the seed mixture of native grasses as recommended by the BLM.
- C. Three sides of the reserve pit will be fenced prior to and during drilling operations. At the time that the rig is removed, the reserve pit will be fenced on the pit (fourth) side to prevent livestock or wildlife from being entrapped. The fencing will remain in place until the pit area is cleaned up and leveled. No oil will be left on the surface of the fluid in the pit.
- D. Upon completion of the proposed operations, if the well is completed, the reserve pit will be treated as outlined above within the same prescribed time. The caliche from any area of the original drill site not needed for production operations or facilities will be removed and used for construction of thicker pads or firewalls for the tank battery installation. Topsoil removed from the drill site will be used to recountour the pit area and any unused portion of the drill pad to the original natural level and reseeded as per BLM specifications.

9. Surface Ownership:

The well site and lease is located entirely on Federal surface.

10. Other Information:

- A. The vegetation around the well site is moderately sparse, with prairie grasses, some yucca, and miscellaneous weeds.
- B. The top soil at the well site is sandy.
- C. There is a water well, with wind mill located 660' from the proposed well, with an eathern watering tank.
